ASTRO'S POROUS PEBBLE PAVING

Astro's **NEW PRODUCT PEBBLE STONE PAVING** is a resin bond permeable paving product that is ideal both for internal and external applications. It is an environment friendly, smooth, easy to maintain, and hardwearing option. The water runs through the pore spaces of the pavement, preventing the buildup of puddles. Also, the drainage holes in the surface allow water to filtrate through the surface layers that helps minimizing downstream flooding and storm water overflow. It provides a hard-paved low maintenance surface which is a good alternative to traditional hard surfaces used in carparks, footpaths, driveways, etc. This hand troweled wetpour surfacing system can be installed over uneven, undulating or damaged existing concrete or bitumen surfaces. Its benefits are:

- (i) Low maintenance – no weeds, puddles or loose stones to sweep up.
- (ii) Ideal for pathways and driveways. Can be installed over existing driveways and pathways without any demolition work.
- (iii) Also, suitable for forecourts, courtyards and tree surrounds.
- (iv) It is smooth and accessible – ideal for pushchair, bicycles, wheelchairs and mobility scooters.
- (v) It is UV stable – there is no colour fading.
- (vi) Ideal for pool surrounds and aquatic centres. Slip-resistant due to its textured surface that allows water to run through preventing puddle forming.
